In this article, the technical feasibility of various kinds of raw and surface oxidized carbon nanotubes (CNTs) for sorption of divalent metal ions (Cd 2+, Cu 2+, Ni 2+, Pb 2+, Zn 2+) from aqueous solution is reviewed.The sorption mechanisms appear mainly attributable to chemical interactions between the metal ions and the surface functional groups of the CNTs.

Chapter 11 Review Flashcards | Quizlet

Examples of solutions that are not aqueous solutions include any liquid that does not contain water. Vegetable oil, toluene, acetone, carbon tetrachloride, and solutions made using these solvents are not aqueous solutions. Similarly, if a mixture contains water but no solute dissolves in the water as a solvent, an aqueous solution is not formed.

Multicomponent reactions are powerful synthetic tools for the efficient creation of complex organic molecules in an one-pot one-step fashion. Moreover, the amount of solvents and energy needed for separation and purification of intermediates is significantly reduced what is beneficial from the green chemistry issues point of view. This review highlights the development of multicomponent ...

Over the past decades, a series of aqueous rechargeable batteries (ARBs) were explored, investigated and demonstrated. Among them, aqueous rechargeable alkali-metal ion (Li +, Na +, K +) batteries, aqueous rechargeable-metal ion (Zn 2+, Mg 2+, Ca 2+, Al 3+) batteries and aqueous rechargeable hybrid batteries are standing out due to peculiar properties.In this review, we focus on the ...

The Aqueous Solutions solvent - LPS

An aqueous solution is a solution in which the solvent is water, whereas in a nonaqueous solution, the solvent is a substance other than water. Familiar examples of nonaqueous solvents are ethyl acetate, used in nail polish removers, and turpentine, used to clean paint brushes. In this chapter, we focus on reactions that occur in aqueous solution.
