Hello! We need high efficiency high voltage output (600V 0.6A) converter. Now we're using FSFR2100 from Fairchild at 100 kHz with 500V 0.5A output at constant voltage. In order to decrease dimensions and volume, I want to try to build the converter, based on HiperLCS LCS708HG IC running at high frequency (200-250 kHz). But, I need wide output voltage range at wide input voltage and wide load ...

The series uses step-down non-isolated power modules that operate from an input range of 9 up to 53Vdc, with a wide adjustable output voltage range of 3.3 up to 24V. The DDA is ideally suited for generating additional low cost, high current outputs from an existing 24V bus in industrial, semi fabrication and test and measurement equipment.

The LT[®]1676 is a wide input range, high efficiency Buck (step-down) switching regulator. The monolithic die includes all oscillator, control and protection circuitry. The part can accept input voltages as high as 60V and contains an output switch rated at 700mA peak current. Current mode control offers excellent dynamic input supply rejec-

~~Using HiperLCS in adjustable wide output voltage range ...~~

It's difficult for LLC-Series Resonant Converter (LLC-SRC) to achieve a wide range of output voltage for a certain input voltage. Traditional solution to this problem is employing dummy load or burst control mode. Dummy load brings down the efficiency and burst control mode gives rise to a ripple of output voltage. To solve this problem, a PFM and phase-shift hybrid control strategy for full ...

The PMP10200 reference design uses the UCC28700 primary-side regulated quasi-resonant flyback controller to generate a 28V output from an DC input. The input voltage range is between 25VDC and 520VDC. It is a low cost solution because no optocoupler is needed to regulate the output voltage.

High Frequency Wide Output Range Boost Flyback Converter ...

The high-level output makes the sensor less sensitive to noise or electromagnetic interference. The output can be read by a frequency or period meter and then converted into a temperature reading. The second type of temperature sensor is made up of various types of multivibrator circuits using an SOI type 555 timer and the passive components mentioned above.

Abstract: In fuel cell vehicles, the output voltage of the fuel cell source is typically much lower than the voltage required by the dc bus, and also this output voltage drops significantly as the output current increases. In order to match the output voltage of the fuel cell source to the dc bus voltage, a new dc-dc boost converter with a wide input range and high voltage gain is proposed to ...
