A soft-start controller is used in three-phase AC induction motors to reduce the load on the self-starting motor and the current surge of the motor during start-up. This reduces the mechanical stress on the motor and shaft, as well as the electrodynamic stresses on the attached power cables and electrical distribution network, extending the lifespan of the system.

Low voltage AC (LVAC) induction motors are the workhorse motor technology for many segments of the electric vehicle industry; providing a tough-to-beat balance of cost, performance, efficiency, reliability, mechanical simplicity, motor control simplicity and overall system cost.

~~Sensorless Field Oriented Control (FOC) of an AC Induction ...~~

AC induction machines are popular due to their simplicity, reliability, and direct operation from an AC line voltage. ACIMs are asynchronous machines and always have a lower mechanical rotor speed than the power line frequency. The principle of operation for an ACIM is based on the voltage induction from the stator to the rotor.
