In last weeks google hangout I was asked which home theater acoustic design software I would recommend? Well in all honesty, I don't use a particular software that's designed specifically for home acoustic design because I'm an engineer. I think in terms of energy and reflections and build-up of low frequencies and stuff like that, speakers are just sound sources to me.

The single most important factor of a great sounding home theater is the acoustic properties of the room itself. Not the brand of speakers, not the receiver, not the bit rate of the movie soundtrack. Unfortunately, room acoustics is usually the area where most people give the least amount of attention.
