Taking an application-oriented approach, this book addresses the art and science of mathematical modeling related to the mixed integer programming (MIP) framework and discusses the algorithms and associated practices that enable those models to be solved ...

This course is an introduction to linear optimization and its extensions

emphasizing the underlying mathematical

structures, geometrical ideas, algorithms and solutions of practical problems. The topics covered include:

formulations, the geometry of linear optimization, duality theory, the simplex method, sensitivity

Applied Mathematical Modelling is primarily interested in papers developing increased insights into real-world problems through novel mathematical modelling, novel applications or a combination of these.

Papers employing existing numerical techniques must demonstrate sufficient novelty in the solution of practical problems.

Optimization: introduction
in mathematical programming and explores problem formulation with applied issues in decision making. Advanced topics including solution algorithms will be discussed only to the extent necessary to build the model and interpret solutions .

Do not look at the date of this book (1977). It still provides the foundation of applied mathematical programming used today. And it is still used today in modeling courses as the main reference because it covers topics from A to Z in a practical and easy-to-understand manner.
