The Polymer Explosion-Crash Course Engineering #20

Course Description This course offers and overview of engineering analysis and design techniques for synthetic polymers. Treatment of materials properties selection, mechanical characterization, and processing in design of load-bearing and environment-compatible structures are covered.

Polymer Engineering and Technology - Learn.org

Engineering design of a manufacturing process is building a system of an artificial reality. The process engineering design should embody the self-organization characteristics of integrity, openness, hierarchy, progressive and dynamic-orderliness by means of selection, adjustment, reciprocation, coordination, evolution, etc.

Based on more than twenty years of classroom experience, Engineering Design with Polymers and Composites is the first textbook to unite these topics in a single source. The authors take a bottom-up functional approach rather than a top-down analytical approach to design.

Engineering Design - an overview | ScienceDirect Topics

Polymer engineering is generally an engineering field that designs, analyses, and modifies polymer materials. Polymer engineering covers aspects of the petrochemical industry, polymerization, structure and characterization of polymers, properties of polymers, compounding and processing of polymers and description of major polymers, structure property relations and applications.

Fundamentals of Polymer Engineering

With training in polymer engineering and technology, you might work as a polymer engineer, studying plastics and other polymers at the molecular level, selecting polymers for new applications and testing or processing plastics for new products. Alternatively, you might choose less scientific and more production-based work as an engineering technician or technologist, focusing on breaking down wood, cotton, petrochemicals and other raw materials to create polymers in an industrial plant.

This article describes the design and synthesis of donor-bridge-acceptor-based semiconducting polymer dots (Pdots) that exhibit narrow-band emissions, ultrahigh brightness, and large Stokes shifts in the near-infrared (NIR) region. We systematically investigated the effect of n-bridges on the fluorescence quantum yields of the donor-bridge-acceptor-based Pdots. The Pdots could be ...
