In the second part of the Ionic and Covalent Bonds simulation, you will learn about the octet rule and how to apply this to building Lewis dot structures in a virtual drawing activity. You will see that there are many ways that covalent bonds can be formed, depending on the compound and electron configuration.

Models of Covalent Bonding - Science Notebook

Covalent bonding can be modelled using balloon. Modeled here hydrogen fluoride, water, ammonia, methane, and carbon dioxide.

Building Covalent Compounds

The electron sharing that occurs within covalent compounds can be a very abstract concept to understand. Many chemistry (and biology) classes will provide students with model kits to make covalent bonding a little more concrete. This worksheet is meant to accompany a class working with these models to build specific organic compounds.

models. 3) Draw all the isomers of selected formulas. Brief Overview

13.7: The Covalent Chemical Bond: A Model - Chemistry ...

The chemical formulas for covalent compounds are referred to as molecular formulas. A chemical formula for a covalent compound, because these compounds exist as separate, discrete molecules. Typically, a molecular formula begins with the nonmetal that is closest to the lower left corner of the periodic table, except that hydrogen is almost never written first (H_2O is the prominent exception).

Lab Model Building with Covalent Compounds

Model Building with Covalent Compounds Background Most of our learning is in two dimensions. We often draw representations of molecules on flat paper. Two-dimensional representations are known as Lewis structures. A pair of dots is used to

represent a lone pair of electrons, and a single covalent bond is represented by a straight line.

CHEMISTRY LAB: MOLECULAR MODEL BUILDING LAB

Octet Rule. The Octet Rule requires all atoms in a molecule to have 8 valence electrons--either by sharing, losing or gaining electrons--to become stable. For Covalent bonds, atoms tend to share their electrons with each other to satisfy the Octet Rule. It requires 8 electrons because that is the amount of electrons needed to fill a s- and p- orbital (electron configuration); also known as a ...

Lab Model Building with Covalent Compounds

He used this idea to explain several previously puzzling facts about chemical compounds. In this lab, we will use a kit to model the 3D structure of a number of molecules, including several that van 't Hoff focused on. After building the molecular models, you will draw them on

Building Covalent Compounds. Building Covalent Compounds Name: Date:
Directions: Create this data table on a separate piece of paper. Create 10 covalent compounds, draw a Lewis Dot diagram and build a molecular model of each. You will need a stamp for each molecule that you draw & build.

Geometry of Covalent Compounds
2) Write each compound formula in the data table. 3) Write the electron dot diagram for each formula. Use different colors for each type of atom. 4) Build each model as you go. Make sure all group members see each model, and take turns building. Use the kit's color key. 5) Draw the "ball-and-stick" structure for each.
