For children up to 18 years, charts based on a

4—University of Washington

A percentile of 50% represents the average or mean head circumference. A value below 50 percent means a baby's head circumference is less than the average. A value greater than 50 percent means a baby's head circumference is above average. A doctor or physician should be consulted to determine growth status.

The value of head circumference measurements after 36—

Nellhaus male and female head circumference charts for children over 3 years old (I don't love these charts, as the pooled data is from 1948-1965, and is not as "interracial" as advertised, but we don't have many other options for older children). These 2010 United States head circumference growth reference charts: birth to 21 years, by Rollins ...

Head circumference is an independent clinical finding—

Head circumference graphs for boys and girls from birth to 18 years of age, calculated from reports in the world literature published since 1948, are presented. No significant racial, national, or geographic differences in head circumferences were found. A single "normal" head circumference, that is one which lies within two standard deviations above and below the mean for age and sex, may ...

The CDC growth charts show head circumference up to 36 months. For children up to 18 years, charts based on a composite, international sample have been standard for many years (Nellhaus, 1968). 2.

REFERENCES—UpToDate

Head circumference, or occipitofrontal circumference (OFC), correlates with cognitive function,1, 2, 3 Intracranial volume, 4 and brain volume when age and sex are considered. 5 OFC measurements can detect abnormal brain growth secondary to underlying pathology or help describe a unique phenotype. 6 More than 500 conditions involving either microcephaly6, 7 or macrocephaly 8 have been reported ...

WHO | Head circumference for age

More recently, Rollins et al. studied previous head circumference results and charts, and by drawing on the strengths of these studies they were able to generate a more useful set of male and female head circumference charts for clinical use from birth to 21 years of age. 15 We have now converted from the Nellhaus charts to these updated Rollins graphs in our day-to-day practice. 11.15 ...

Is anyone using Nellhaus charts, particularly for head—

The CDC growth charts show head circumference up to 36 months. For children up to 18 years, charts based on a composite, international sample have been standard for many years (Nellhaus, 1968).

University of Utah

Is anyone using Nellhaus charts, particularly for head circumference ... The Nellhaus recently popped up as a reference chart, ... this is basically the same experiment Nellhaus proposed in 1968 ...

1—Measuring and Plotting Head Circumference

The Bushby et al. adult OFC charts, which correct for adult height, were not used since we analyzed height as a separate variable. OFC standard deviation (OFCSD) values to the nearest 0.1 SD were assigned for each age and head circumference using the Nellhaus charts. Additional lines were drawn to correspond to OFCSD values not on the charts.

WHO | Head circumference for age

The chart includes a BMI centile lookup and an adult height predictor. These are the 2nd edition (January 2013). They include updates to illustrations and intructions on the interpretation of head circumference. Please contact growth.charts@rcpch.ac.uk for any further information.

Pediatric Clinical Growth Charts—University of Utah

The measurement of head circumference (also called occipitofrontal circumference [OFC]) is a direct reflection of head growth and an important step in the evaluation of childhood growth and development. The etiology and evaluation of macrocephaly in infants and children will be discussed here.
