Neurolinguistics -  
Wikipedia

Neurolinguistics is the study of how language is represented in the brain: that is, how and where our brains store our knowledge of the language (or

# Read Online Perspectives In Neurolinguistics

languages) that we speak, understand, read, and write, what happens in our brains as we acquire that knowledge, and what happens as we use it in our everyday lives.

## Bilingualism

Albert Martin Obler  
Lorraine - AbeBooks  
Abstract.

Approximately half of the world's population is bilingual or multilingual at some level of proficiency.

# Read Online Perspectives In Neurolinguistics

Despite these numbers, there is little agreement among researchers concerning the cerebral representations and/or functions of multiple languages in any one individual. The reason for this lack of agreement is basically the dearth...

Abstract.

# Read Online Perspectives In Neurolinguistics

Neurolinguistics is a relatively new and very promising scientific discipline that emerged in the mid-20th century and has been actively developing during the last five decades.

Generally speaking, its main scope is to investigate relationships between the human brain and language. This topic is highly relevant from both a theoretical...

chapter, the neuropsychological and neurolinguistic evidence are synthesized. It is concluded that language is organized in the brain of a bilingual in a manner different from that which might have been predicted by studies of cerebral organization for language in monolinguals.

The bilingual brain :
