**Anesthesia Guidelines: Ruminants | AHC Research Services ...**

Rumen fistula surgery for the private practitioner is becoming more common as the need for transfaunation becomes more evident. Transfaunation is the process of transferring rumen microbes from one cow to another. Generally, transfaunation is used to re-inoculate the rumen of a sick cow with a healthy microbial population.

**Veterinary Medicine Books eBooks and Journals | Elsevier**

Ruminant stomachs have four compartments: the rumen, the reticulum, the omasum and the abomasum. Rumen microbes ferment feed and produce volatile fatty acids, which is the cow's main energy source. Rumen microbes also produce B vitamins, vitamin K and amino acids. In calves, the esophageal grooves ...
