Saliva and Your Mouth: Function of Saliva in Oral Health

Human saliva contains a large number of circulating proteins that can serve as indicators of the body's health and well-being. Previous research from us and others have demonstrated the possibility of detecting cardiac specific biomarkers in saliva. These biomolecules enter saliva through diffusion, active transport or filtration. Purpose:

Saliva and oral health-Basic and allied - SlideShare

Saliva, or spit, plays a significant role in maintaining oral health. It is derived from blood and acts as the bloodstream of the mouth. What this means is, like blood, saliva helps build and maintain the health of soft and hard tissues. When saliva flow is reduced oral health problems such as tooth decay and other oral infections can occur.
