displacement of 4 m while a force F of 12 Newton acts on it.

~~Work Physics Problems With Solutions~~

Work is done when an object moves in the same direction, while the force is applied and also remains constant. Refer the below work physics problems with solutions and learn how to calculate force, work and distance.

~~Work Word Problems
(solutions, examples,
videos)~~

Justification: You are not doing any work because you didn't move the box in any direction. With no displacement $W = Fd = 0 \text{ J}$ (Answer D). Yes, it does feel like you are putting work in just by holding a heavy box, but in physics the definition of work requires that a force

WORK Suppose that, a
force is applied an
object and object
moves in the direction
of applied force then

Where To Download Work Physics Problems With Solutions And Answers

we said work has done. Let me explain in other words. There must be a force applied to an object and object must move in the direction of the applied force. If the motion is not in the direction of force or force is applied to an object but there is no motion then we cannot talk about work.
